

MANUAL APPLICATION CEMENT.

Specially designed for hip/general surgeries. **Subiton RO** cement has proven, excellent fatigue resistance properties, resulting in superior performance in implant fixations.

- Fast transition to plastic, easy to use dough with optimum working time.
- Outstanding mechanical properties.

Subiton cements are used for bone cementations and fixations. Its use is advised in Orthopedics and other surgical specialties, when fixation of prosthetics elements with sterile setting material is sought.
